Udata's Latest Internet Technology

Traditionally these systems have been delivered on CD because of the huge volume of data that comes with the system. Now we have constructed a unique system that progressively builds the database from the internet while you use your system. After a period of use your database will be full of data, making fewer requests for data online. This technology means that you can request any fully cleaned data history at any time. Simply right hand click on your chart and Download Full History. It takes seconds. This also removes the onus from you to us to keep your history database up to date. Once you have downloaded your Udata system, the internet is only used for data delivery making it many times faster than using browser based systems.

Udata Datafeed powered by Standard & Poor's

Up to 20 times faster, better quality and reliability as well as more data

Udata has built a new datafeed technology utilising Standard & Poor's Comstock XpressFeed. This is delivered via the internet using Internet Protocol (IP) technology, Udata compression techniques and client server technology, meaning that you will instantly notice data streams into your system at a much higher data rate than you are used to.

Broadcast systems on standard UK terrestrial data feeds are typically delivered at data rates of between 3 and 12kBits/sec while a standard internet connection allows data rates of up to 56kBits/sec and broadband many times that at up to 2Mbits/sec. The traditional broadcast systems of the 90's have been superseded by this new technology.

3rd party Datafeed Compatibility

If you are already running your own data feed and don't want to switch, no problem. Udata systems are already compatible with a host of data services. We are confident you will not find a better service than ours, but if you want to stay with your current feed provider it is likely Udata is compatible. See our website or link in via Windows Dynamic Data Exchange (DDE).

Want to run both systems together

For the ultimate investment suite you can run both systems together combined in one for a seamless experience or as separate applications. They both use the same data engine and you can add the other system at any time. Why not start with your preferred choice in the knowledge that you can just add the other system when you want.

*Subject to status. Prices and availability may change at any time.

Quick Guide to "always on" Internet connection

Many people have worried about the telephone call costs that rack up while using the internet. Now there are a number of services that allow you to have unlimited use of the internet with a low fixed rate monthly fee. Broadband is lightning fast but is not available in all parts of the country. This typically costs under £30 per month. A number of providers also offer a normal dial up service on a Freephone number allowing you to stay connected all day for free and this is normally less than £15 per month. Visit www.updata.co.uk for a list of providers.

Your software download is completely free, just pay for the data service which suits you. You can upgrade your service at any time These services are part of our new high speed internet data services powered by Standard & Poor's ExpressFeed – many times faster than your normal feed.

What people have said about the free trial download and using our products

“ I've now moved 100% to Technical Analyst. All the charts that I publish and all the analysis generated are from the system. The American charting package that I have been using for years can now go in the bin! ”
Bill Adlard, Author of Chart Insight, Hemscott

“ Well thoughtout interface. Excellent product. ”
Roger Edmunds, Investor

“ Thank you for producing such a brilliant rock solid program. ”
Edward Verner, Investor

“ The search for the perfect stock made easy...Using Updata Technical Analyst you stand a good chance of doing better than you are now... it certainly gives one an edge in spotting reversal points... The user friendly functionality of Updata's TA is that it does very complicated things for you in a very simple way... many of the situations highlighted in my columns would not have been found without this product. ”
Zak Mir, Freelance Journalist

“ The software is in a league of its own. Brilliant. It will make me a happy man and if it does not make me a richer man it will be my fault. ”
Tony Gamble, Active Investor

“ I have just installed the system. It certainly looks impressive. Fabulous! ”
Peter Temple, Author and Financial Times Journalist
